

TeleCompCare®

Self-Care Text Option

AF Group's TeleCompCare® enables an injured worker to report their workplace injury and speak with a registered nurse who will assess the severity of the injury and recommend one of three treatment options: telemedicine, in-person doctor visit or self-care.

If self-care is recommended during a nurse triage call, the injured worker has the option to receive their self-care instructions via text message. After opting in, the injured worker will receive a text with a self-care document link, allowing them to reference this information and share it with their employer. This added option helps avoid confusion and aids the injured worker during their recovery.

Self-care instruction examples for a sprained ankle.
